New life for old canals ...

... proven!

The most economical repair solution for canals, flumes and dams ...

AquaLastic® is used by many leading irrigation organizations in the USA, including the United States Bureau of Reclamation

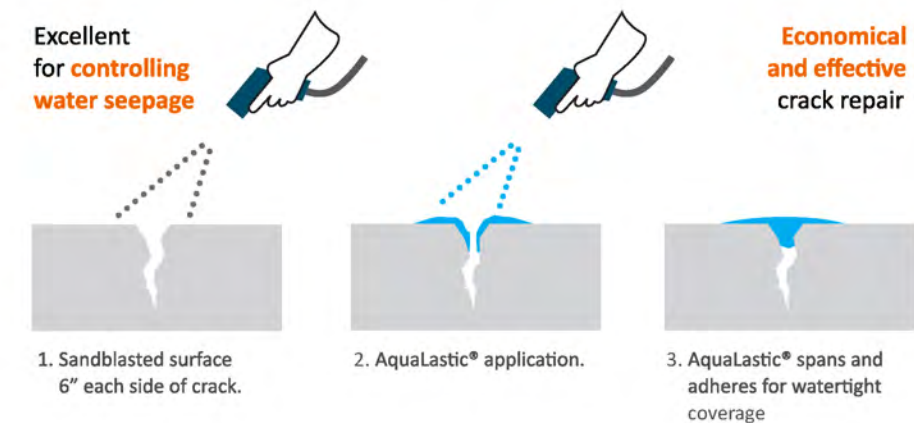

Canal Repair System

The AquaLastic® Canal Repair System offers many options for the economical repair of concrete lined canals, flumes, and dams. Even the most badly degraded structure can be effectively repaired and rehabilitated, greatly prolonging its life.

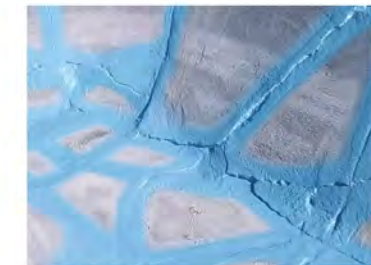

It also completely rehabilitates wood and tin structures as well as other materials, and is a highly effective tool to prevent water seepage in all structures. **With millions of feet of successful rehabilitation over more than 12 years**, it is the most proven method of lined canal repair in the USA and worldwide.

AquaLastic® is a proprietary formula product made in the USA and developed for flowing water situations.

This unique formula offers a range of advantages including adhesion strength, the ability to expand and contract easily, and longevity in the most demanding of situations. It is used in conjunction with hydro fillers where appropriate. AquaLastic® is applied only by applicators who have been approved for their standard of work, commitment, application equipment and experience.

Badly degraded canal structure.

AquaLastic® expands and contracts easily so that it retains its strength in commonly changing conditions - freeze, thaw and heat.

Long lasting seal to restore structural integrity.
